

Florida Citrus Harvesting Season

U.S. and Florida Production

U.S. citrus utilized production for the 2014-2015 season totaled 9.02 million tons, down 4 percent from the 2013-2014 season. Florida accounted for 56 percent of total United States citrus production, while California totaled 41 percent, and Texas and Arizona combined produced the remaining 3 percent.

Florida's share of U.S. citrus production was 112.65 million boxes in the 2014-2015 season, down 9 percent from the previous season's 124.13 million boxes. Production decreased for all citrus varieties when compared to last season.

Florida's all orange production decreased by 8 percent to 96.8 million boxes. All grapefruit production is down 18 percent to 12.9 million boxes. Production of Honey tangerines is down 28 percent and early tangerine production is down 17 percent, resulting in a 22 percent decrease in all tangerines. Tangelo production is down 23 percent.

Production by Area and County

The top 5 citrus producing counties were Polk (16.8 million boxes), Hendry (15.8 million boxes), De Soto (13.7 million boxes), Highlands (12.7 million boxes), and Hardee (10.1 million boxes). Together they account for 61 percent of the State's total citrus production. The Southern area had the most citrus, followed by the Central and Western areas. The remaining two areas, the Indian River and Northern area, account for only 17 percent of the State's total citrus production. Oranges constitute 86 percent of the citrus production, grapefruit accounted for over 11 percent, and tangerines and tangelos represent almost 3 percent.

Estimates of county production are prepared from objective survey data used in forecasting citrus crop production. The apportionment of final harvest to the counties is based on bearing trees, an estimate of the average fruit per tree, and the drop and size surveys. Sample size used in these surveys and the distribution of the sample groves around the State are chosen to minimize error in the estimates of production and are not to be considered as accurate for the counties as at the State or area levels.

Value

The value of the 2014-2015 United States citrus crop decreased 9 percent from last season, to \$3.38 billion (packinghouse-door equivalent). Total value of production for 2014-2015 is lower for all citrus crops except lemons. Orange value of production decreased 13 percent from last season and grapefruit value is down 17 percent. Tangerine and mandarin value of production is 8 percent lower than last season and lemon value of production is up 8 percent. Tangelo value decreased 3 percent from the previous season.

Florida's \$1.03 billion preliminary on-tree value of the 2014-2015 citrus crop is 12 percent less than the revised value of \$1.17 billion for 2013-2014. The price per box is higher for tangelos and tangerines, but lower for oranges and grapefruit.

Citrus Value of Sales On-Tree by Crop Year – Florida: 2005-2006 through 2014-2015

Crop year	Value ¹ (1,000 dollars)	Crop year	Value ¹ (1,000 dollars)
2005-2006.....	1,024,610	2010-2011	1,368,626

² Revised.

³ Preliminary.

Foreign Exports

Fresh fruit exports totaled 7.0 million $\frac{4}{5}$ bushel cartons. Japan accounted for the majority of Florida grapefruit exports. Canada received most of Florida's orange and specialty fresh fruit exports. A total of 9.0 million gallons of Frozen Concentrated Orange Juice (FCOJ), and 2.4 million gallons of Frozen Concentrated Grapefruit Juice (FCGJ) were exported in the 2014-2015 season.

Frozen Concentrate

Final Frozen Concentrated Orange Juice (FCOJ) yield, as reported by the Florida Department of Citrus, was 1.502203 gallons per box of 42° Brix concentrate. A record FCOJ yield of 1.673141 was set in the 2007-2008 season. The early-midseason portion of the crop finalized at 1.419546 gallons per box. The late crop yielded 1.584149 gallons per box.

The final Frozen Concentrated Grapefruit Juice (FCGJ) yield was 1.174619 gallons per box of 40° Brix concentrate, down from last season's final of 1.213862 gallons per box. A record FCGJ yield of 1.364660 gallons was set in the 2006-2007 season.

The final Frozen Concentrated Tangerine Juice (FCTJ) yield of 1.372700 gallons per box of 42° Brix concentrate was slightly lower than last season's final of 1.383379 gallons per box. A record FCTJ yield of 1.757423 gallons was set in the 1992-1993 season.

Tree Inventory

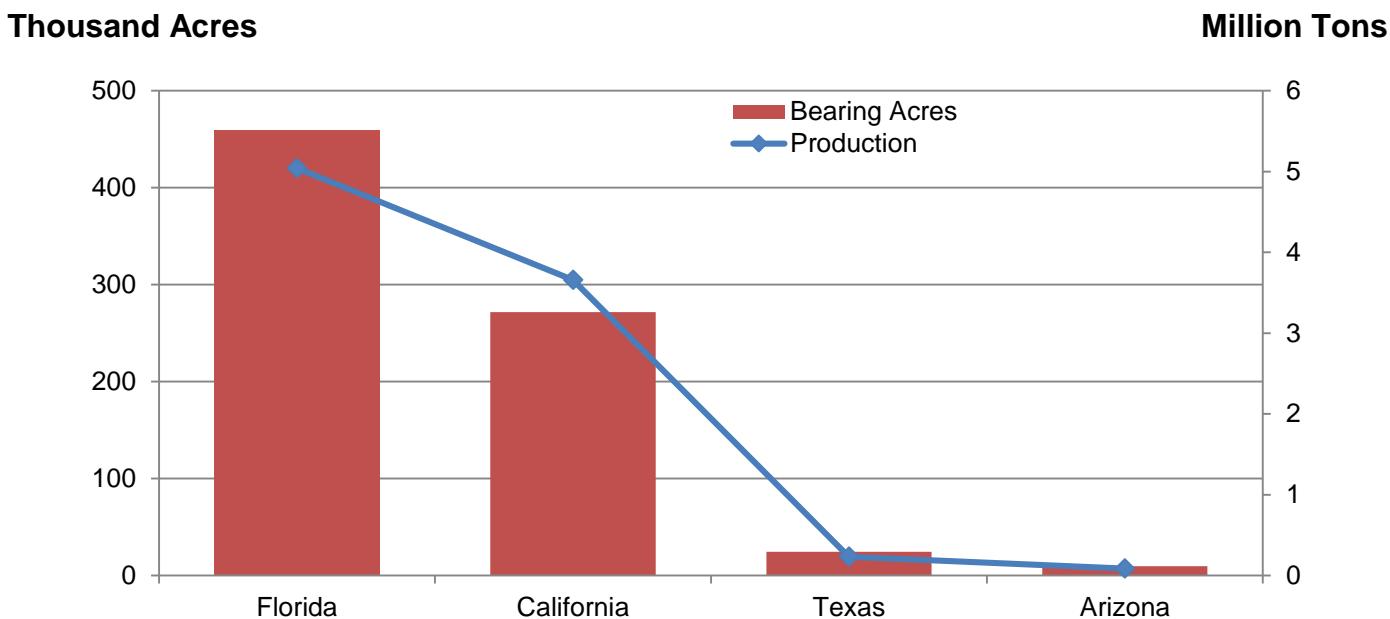

Results of the annual Commercial Citrus Inventory show total citrus acreage is 501,396 acres, down 3 percent from the last survey and the lowest in a series which began in 1966. New plantings, at 12,343 acres, is the most recorded in a single season since the beginning of annual surveys in 2009. The gross loss of 26,094 acres is the largest single season loss recorded during the same period.

Of the 29 counties included in the survey, 22 recorded decreases in acreage, 6 showed increases, and 1 was unchanged. St. Lucie County had the largest net decrease for the second consecutive year, down 2,819 acres from last year, while Brevard County had the highest percentage net loss, with an almost 30 percent acreage reduction. Hendry County had the highest gain of 708 acres, followed by Charlotte, De Soto and Lake Counties. Polk County remains the leader with 80,488 acres.

Orange acreage declined to 441,628, continuing a trend that began after the 2000 survey. Grapefruit acreage is now at 43,962, the lowest in the series. Specialty acreage declined 6 percent and is now at 15,806.

Total citrus trees have declined steadily from the peak in 1998 to 66.8 million. Polk continues to lead with 9.9 million trees, followed by Hendry with 9.7 million, De Soto with 8.9 million, and Highlands with 7.7 million. The total is composed of oranges, 89 percent; grapefruit at 7 percent; and the remainder, including specialty and other citrus, at nearly 4 percent. Bearing trees decreased about 3 percent to 61.0 million while non-bearing trees increased over 13 percent to nearly 5.9 million since the previous survey.

Avocados in Florida

The 2015-2016 production of Florida avocados decreased 192,000 bushels, or 16 percent, when compared to the 2014-2015 harvest season. Bearing acreage is down 200 acres from the previous season. The price per bushel is \$20.49, up 14 percent from the 2014-2015 crop year. The total value of crop production is \$20.6 million, a decrease of 5 percent from the previous season.

In Florida, most early season varieties of avocados are West Indian types, whereas midseason and late varieties are mostly Guatemalan-West Indian hybrids or Guatemalan types. Commercial production is primarily in Miami-Dade and Collier Counties. Florida avocados have a lower fat content than those from other states and countries, are typically larger than avocados from California, and are available from June through the end of February.
